

Unify Your CRE Tech Stack and Unlock the Power of Your Data

Integrate **any data source** and deliver it to **any system** with the **GroundFloor™** Smart Building Platform

With multiple solutions to manage the front-office, back office and everything in between, property teams are spending a substantial amount of time switching between systems or manually transferring data from one system to another, causing increased costs, blind spots and inefficiencies.

But what if you could combine the systems, processes and applications that power your properties into a single source of truth and then make these data sets work together for powerful analytical insight and decision-making across your entire property portfolio?

Well now you can.

Autonomy

Organize and standardize data from any source.

No Vendor Lock-In

Integrate and connect any technology and deliver it to any platform for a cost-effective, flexible and future-proof operation.

Quick Deployment

Reduce costs and increase efficiency with a “code-free” approach to data integration.

Easy to Use

Reduce the complexity of navigating your data. Consolidate data and generate comprehensive reports in minutes instead of weeks.

Maximize Profitability Increase Efficiency Mitigate Risk

Automation

Digitize and automate day-to-day operations to reduce busy work and time-consuming manual processes.

No SaaS Sprawl

Reduces the overall number of systems that must be managed and associated SaaS subscription fees.

Scalability

Modernize your existing tech stack and adopt a new application anytime. Our platform adapts to your needs, big or small with the same capabilities, no matter the requirements.

Security

Ensure data security and compliance with a holistic integration platform. No need to disclose data across multiple third-party systems or applications.
