PREMISE HQ

Mitigate Risk and **Guarantee Compliance** with No-Code Data Integration

One of the most critical responsibilities for a property manager is handling compliance and risk mitigation. From adhering to building codes and gathering COIs to managing SLAs and ensuring safety and sustainability, a substantial amount of information must be collected, managed, and analyzed.
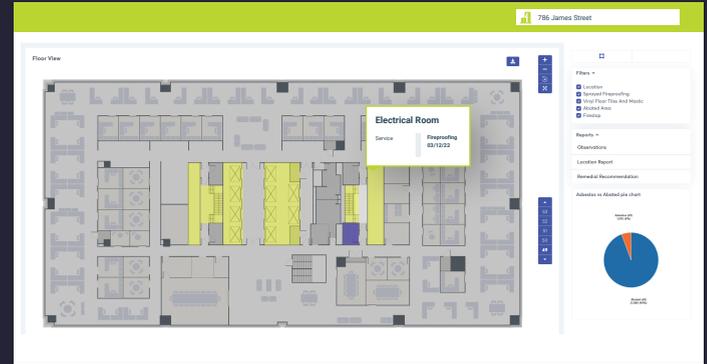

The challenge is that this information comes from disparate sources; vendor management systems, internal spreadsheets, building management systems, and IoT devices, and is managed manually in many cases. That's where we can help.

Introducing GroundFloor™

With GroundFloor, you can collect, integrate and standardize an unlimited number of datasets from all of your IoT devices, building systems, corporate systems, vendor services and even people to visualize and interact with your assets and operations through a single platform. No coding is required.

- Occupancy Compliance
- COI Tracking
- Vendor Compliance
- HazMat Compliance

premisesaas.com

Integrate Data in Minutes

- No manual coding is necessary
- Integrate with your existing systems
- Add new data sets anytime
- Automatically define relationships between data sets

Automate Tasks

- Automate COI requests, collection, and compliance
- Track and manage SLA agreements
- Automate work order requests and schedule maintenance
- Alert staff to potential issues, next steps or project completion

Get Actionable Insights

- Monitor occupancy and indoor environmental quality
- Identify and manage HazMat threats
- Track vendor projects from start to finish
- Get real-time visual insight into portfolio risk exposure

Mitigate Risk

- Quickly validate compliance across all parties
- Proactively manage health and safety
- Stay ahead of ever-changing compliance regulations
