PREMISE HQ

Simplify, Standardize and Scale Your **IoT Data from a Single Pane of Glass**

The Internet of Things (IoT) has a significant impact on the CRE industry, helping companies grow margins, dramatically improve building operations, enhance tenant relationships, and generate new revenue opportunities.

However, IoT does not come without significant challenges. Facilities managers must navigate and manage data from a complex ecosystem of vendors and systems. That's where we can help.

Introducing GroundFloor™

With GroundFloor™ you can ingest, integrate and standardize an unlimited number of datasets from all of your IoT devices, building systems, corporate systems, vendor services and even people, to visualize and interact with your assets and operations through a single platform.

➡ Connect Any Data Set

➡ Standardize Your Data

➡ Automate Workflows

➡ Unlock Actions & Insights

➡ Improve Communication & Support

premisesaas.com

Occupancy

- Monitor traffic flows
- Identify over-utilized and under-utilized areas
- Control social distancing measures
- Optimize cleaning schedules
- Minimize maintenance and energy expenses

Air Quality Monitoring

- Increase health outcomes for occupants
- Reduce energy consumption
- Increase building efficiency
- Decrease tenant turnover

Leak Detection

- Avoid rising insurance costs
- Avert tenant displacement
- Prevent leaks and water damage
- Manage water resources and costs

Cleaning

- Optimize cleaning schedules and work routes
- Provide tenants with transparent cleaning practices
- Monitor stock levels
- Reduce waste and costs
